## Rajamangala University of Technology Phra Nakhon 2022

Project to provide consultation on the improvement of wastewater treatment systems in buildings

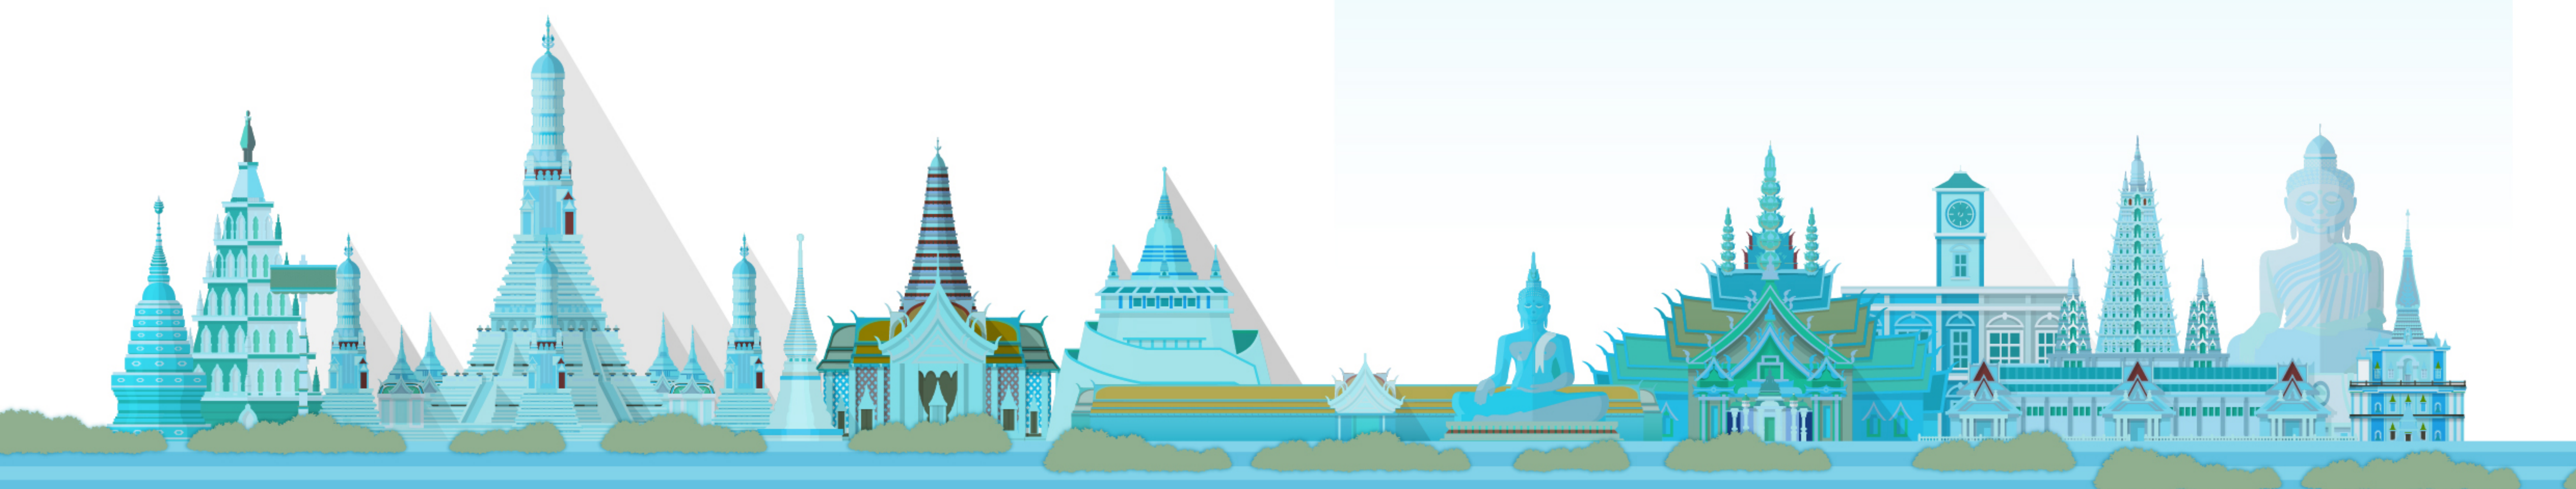

The Department of Environmental Science and Technology at Rajamangala University of Technology Phra Nakhon has organized a project to provide consultation on the improvement of wastewater treatment systems in buildings.

The Department of Environmental Science and Technology has initiated a community service project within the field of Environmental Science and Technology. This project offers consultations for the improvement of wastewater treatment systems in buildings (Phase 3). The department has reported the successful completion of Phase 1 to the Dean of the Faculty of Science and Technology, Dr. Jirasak Tharajak. The project was led by Dr. Kitisak Tangsatchang, who also provided academic consultation to Elmer Integration Co., Ltd., a company specializing in wastewater treatment systems. This project has serviced more than 50 buildings in the Bangkok metropolitan area.

In addition to expanding the project to Phase 3, which will serve wastewater treatment systems in central, eastern, and southern regions, there are also recruitment activities. Elmer Integration Co., Ltd., and Neural Engineering Tech Co., Ltd. (a company specializing in safety training and ISO45001 standards) have opened applications and interviews for students majoring in Environmental Science and Natural Resource (PSNR 60) who will graduate this year.
